

Maximum Heating Efficiency and Better Heat Pattern

L.B. White's Sentinel v.2 maximizes the radiant heat energy to where it is most needed: to the birds, with minimal waste to convection.

- Advanced reflector design delivers better heat distribution across the floor to the sidewall
- Pressurized burner technology delivers more even heat over the length of the heater.

Now Easier to Use and Maintain!

The L.B. White Sentinel radiant tube heaters provide the utmost ease in operation and maintenance over the life of the heater. The burner box door is positioned on the bottom for drop-down access to vital components. Installation is a breeze with interlocking tubes parts of the complete installation kit.

- Allows for work on heater from under the unit where there is the most room
- Access to components with latches, tools not needed
- Components are accessible and easy to replace

Safe, Reliable Performance

The Sentinel shares the same quality design standards that have earned L.B. White its reputation as the leader in poultry forced air heating and radiant heating. The Sentinel provides the rugged durability to stand up to years of safe, reliable use in harsh confinement environments. And all Sentinels meet or exceed ANSI and CSA standards for safety
